

VORTEX STAND TRIPOD SNARE BASKET

Once installed, the Axis drum basket is designed to remain permanently on the drum's rim or counter hoop. Spare drum baskets may be purchased as accessories for drummers who wish to easily change drums while using the Axis Vortex Stand Tripod. Fits 10" to 16" diameter drums.

Basket Detail — bottom view. Standard size range 10" to 16" diameter drums.

INSTRUCTIONS:

To adjust and affix the basket to a snare, loosen the set screws retaining the telescoping arms at the brass fittings with an Allen key. Center the hub, and telescope the arm out over the rim. The basket gripper pads are designed to fit triple flange, die cast, or wood hoops. The notches in the gripper pads are machined to adapt to the type of rim by being rotated into place. The large notches on one side of the gripper pads are designed for triple flange or die cast hoops.

The active arm is then used for final tensioning. Using the thumbscrew on the active arm, tighten the basket into place. When a perfect fit is achieved,, tighten the lock-screw on the active arm. The basket can remain on the snare drum indefinitely, when packing the drum into cases or even when changing the drum head.
